## Finds and Environmental Specialist Services

The analysis and interpretation of artefacts and environmental remains is an essential part of most archaeological projects. Specialist analysis of the material culture and environmental data from a site greatly enhances our understanding of past societies. Prompt and purposeful analysis by experienced specialists is key to unlocking this potential for understanding.

## Why work with Archaeology South-East?

Our team of in-house specialists and post-excavation project management can provide you with a range of services depending on your particular needs, from single category reports to comprehensive post-excavation programmes. World class laboratory facilities at the Institute of Archaeology offer cutting edge analysis in material science, and access to comprehensive reference and library collections.

## Our Expertise

We have an experienced and dedicated team of finds and environmental specialists with extensive experience in handling material from all archaeological periods from across England and abroad. Our work encompasses material from a range of projects including development-led fieldwork, university research excavations and English Heritage funded projects. We also undertake post-excavation assessments and publication reporting for other leading archaeological companies. We strongly support the training and development of specialist staff with the support of English Heritage and the IFA.

## Services

- Advice and on-site support for finds collection, sampling strategies, spot-dating and conservation requirements
- Post-excavation processing of finds and environmental remains from recovery through to site archive
- Characterisation and dating of material for all types of developer funded reporting including fieldwalking, watching brief, evaluation, excavation
- Full range of artefact analysis including pottery, lithics, building material, metal work and other registered finds from across all periods
- In-house processing and analysis of environmental remains including animal bone, human bone, macro plant remains, wood charcoal and waterlogged wood from all periods
- Comprehensive post-excavation project management including project designs, training programmes, analysis and publication strategies, and report editing

- Specialist analysis, research and illustration for publication and display
- Design and implementation of outreach programmes for schools and local communities - including publicity, design, object handling, site tours
