The Need for Forensic Archaeology and Anthropology

Forensic archaeology and anthropology are fast developing disciplines within archaeology, designed to provide police forces with a range of specialist skills. These skills range from simple bone identification to the location of clandestine graves, their careful excavation and recording, and the biological profiling of any human remains recovered. The appropriate use of a forensic archaeologist and anthropologist during police

investigations ensures that all necessary guidelines are followed and that professional standards are maintained.

Why work with Archaeology South-East?

We assist with the setting up and implementation of searches for clandestine graves in both small gardens and wider areas of the countryside, offering advice as to the appropriateness of various scientific search techniques and carrying out geophysical surveys if necessary. The team is experienced in the careful recovery of both surface and buried human remains. Careful and controlled excavation of a clandestine

grave ensures that the maximum amount of evidence is recovered and ensures that the integrity of that evidence is maintained. Subsequent analysis and biological profiling of human remains recovered can greatly assist a police investigation.

Good teamwork at a crime scene is essential and we are experienced in working alongside other forensic specialists and specialist police teams.

Services

Forensic Archaeology

- Bone identification
- Search and location
- Excavation
- Recovery
- Geophysical Survey
- Surveying and Illustration
- Expert Witness statements

Forensic Anthropology

- Biological profiling
- Age, Sex
- Stature
- Race/Ancestry
- Individualising traits
- Analysis of trauma
- Assessment of post-mortem-interval

Our Expertise

The Senior Forensic Archaeologist is Lucy Sibun BSc PgDip AIFA who has over 12 years experience working alongside Police Investigation Teams at crime scenes. She has written many Expert Witness reports and statements and given Expert testimony in court.

The Senior Forensic Anthropologist Roxana Ferllini BSc. M.A., has 20 years experience in the field, including police related cases in the United Kingdom and Latin America; as well as experience in human rights investigations. Roxana currently co-ordinates the MSc in Forensic Archaeological Science at the Institute of Archaeology, UCL.

They are supported by a team of qualified and experienced forensic archaeologists, osteologists, field archaeologists, surveyors, geophysicists and illustrators. The dedicated surveying team provide spatial control and an accurate record of the scene; our illustrators then ensure that any field drawings are accurately and professionally reproduced.
