## Geoarchaeology: Targeting context and environment

The analysis and interpretation of artefacts and environmental remains is an essential part of most archaeological projects. Specialist analysis of the material culture and environmental data from a site greatly enhances our understanding of past societies. Prompt and purposeful analysis by experienced specialists is key to unlocking this potential for understanding.

## Palaeolithic Archaeology: Excavating at the limits

The excavation of ancient archaeology requires a specialist approach drawing heavily on both geoarchaeological method and sensitive excavation practises. Our long term experience in leading Palaeolithic (Early Stone Age) research allows us to deliver a tailored service aimed at the recovery of archaeology from ice-age sediments. Such deposits are often complex and deeply buried, requiring specialist investigative techniques. We can co-ordinate the multi-disciplinary response required for the archaeology of our earliest ancestors.

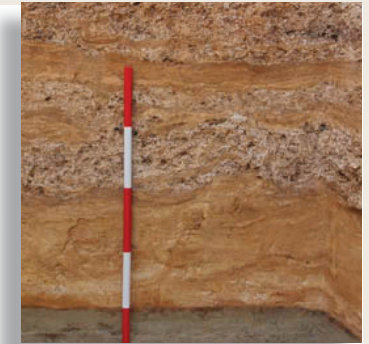

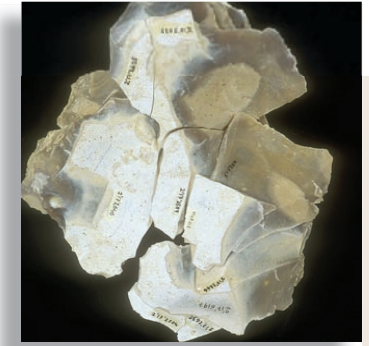

## Our Expertise

Our multidisciplinary approach involves the formation of unique specialist teams tailored to the demands of each project. Archaeology South East draws on a wide range of expertise which reflects the best in modern palaeoenvironmental science and Palaeolithic archaeology.

## Services

- Targeted geoarchaeological evaluation
- Mitigation strategies developed with clients to minimise impact on deep or complex archaeology
- The implementation of purposive borehole, trial pit or window-sample surveys
- Assessment of Palaeolithic potential in river gravel and other aggregate contexts including access to specialist dating services
- The recovery of in-situ stone age archaeology from fine-grained contexts
- Assessment of Holocene colluvial, alluvial and anaerobic contexts

## Why work with Archaeology South-East?

Building on the expertise derived from prestigious excavations at sites including Boxgrove, Beedings and across south east England, we have a proven record in undertaking complex early prehistoric projects. ASE has an established background of work within both construction and aggregate extraction industries. With support from leading specialists across a wide spectrum of disciplines, we are expertly placed to advise and assist with projects ranging from rapid site assessment to the provision of large multi-disciplinary research projects.
