Why is Landscape Research important?

Most development and construction projects have the potential to harm the environment. This does not have to be the case, provided that adverse impacts are understood and can be mitigated.

In order to conserve the best of the past whilst meeting the needs of the future we have to know what is worth keeping and why. This is where archaeological

research can help, and it is for this reason that EC directives and the UK planning system can require the submission of Environmental Impact Assessments and desk-based archaeological surveys. This is not simply an exercise in meeting planning requirements. High quality information helps architects and planners to find better design solutions, and reduces the risk of unforeseen problems. A superficial survey can be a costly one if it fails to identify risk.

Our Expertise

Our in-depth understanding of the historic landscape is based on over fifty years of research. We have worked on surveys throughout the world, and specialise in southern England. We employ leading experts in all periods of history and pre-history, in planning law, topographic survey, geo-archaeology, cartographic and landscape research, archaeological prospection, palaeo-environmental research, and so on. Our specialists are deployed by a dedicated project management team, experienced in meeting the requirements of commercial clients, and used to working effectively within multi-disciplinary teams.

Why work with Archaeology South-East?

We have extensive experience in preparing reports that help to manage, reduce or even remove the risk posed by cultural heritage and other environmental issues. We also understand the needs and concerns of planners and government, and our reports can speed and simplify the business of securing consents.

Services

- Rapid appraisals and heritage statements
- Desk-based assessment
- Documentary research
- Environmental impact assessment
- Environmental statement
- Historic landscape assessment
- Historic landscape characterisation
- Remote sensing and topographic survey
- Geo-archaeological mapping and modelling

We recognise the importance of providing accurate information, presented clearly and concisely. Our aim is to inform, not to confuse.

Clients

Archaeology South-East works with English Heritage, the National Trust, county and district councils, development companies, architects, and numerous private owners.
